

Reconstructive Facial Plastic Surgery

After trauma, cancer surgery or illness, the face can be affected both in appearance and in function. Our physicians have the expertise to address both of these aspects through reconstructive facial plastic surgery.

Some of the most common surgical procedures used in reconstructive facial plastic surgery are listed below:

- Anterolateral free flap (ALT)
- Deep Circumflex Iliac Artery Flap (DCIA)
- Fibular Free Flap
- Medial Sural Artery Perforator free flap (MSAP)
- Pectoralis Major flap
- Scapula flap
